MICHIGAN DEER HARVEST SURVEY REPORT 2002 SEASONS

Brian J. Frawley

ABSTRACT

A survey of deer hunters was conducted following the 2002 hunting seasons to estimate hunter participation, harvest, and hunting effort. In 2002, an estimated 740,529 hunters spent 10,449,426 days afield. Statewide, the number of people hunting deer declined by nearly 2%, and hunting effort declined by 1% between 2001 and 2002. Hunters harvested 476,215 deer, an increase of 3% from the number taken in 2001. Harvest of both antlerless deer and antlered bucks increased by 3%. Statewide, 43% of hunters harvested a deer. About 23% of the hunters took an antlerless deer and 28% took an antlered buck. About 14% of deer hunters harvested two or more deer.

INTRODUCTION

The Michigan Department of Natural Resources (DNR) has the authority and responsibility to protect and manage the wildlife resources of the State of Michigan. Harvest surveys are one of the primary management tools used by the DNR to accomplish its statutory responsibility. Estimating hunter participation, harvest, and hunting effort are the primary objectives of these surveys. Estimates derived from harvest surveys as well as information from summer deer observations, deer harvest check stations, deer pellet group surveys, and population modeling are used to monitor deer populations and establish harvest regulations.

During 2002, white-tailed deer (*Odocoileus virginianus*) could be harvested primarily during (1) youth, (2) archery, (3) early antlerless, (4) early antlerless in Deer Management Unit (DMU) 055, (5) regular firearm, (6) muzzleloader, and (7) late antlerless hunting seasons. In order to harvest a deer, hunters had to possess a hunting license (firearm, archery, combination, or antlerless license) (Table 1).

Equal Rights for Natural Resource Users

The Michigan Department of Natural Resources (MDNR) provides equal opportunities for employment and access to Michigan's natural resources. Both State and Federal laws prohibit discrimination on the basis of race, color, national origin, religion, disability, age, sex, height, weight or marital status under the Civil Rights Act of 1964, as amended (MI PA 453 and MI PA 220, Title V of the Rehabilitation Act of 1973 as amended, and the Americans with Disabilities Act). If you believe that you have been discriminated against in any program, activity, or facility, or if you desire additional information, please write the MDNR, HUMAN RESOURCES, PO BOX 30028, LANSING MI 48909-7528, or the MICHIGAN DEPARTMENT OF CIVIL RIGHTS, STATE OF MICHIGAN PLAZA BUILDING, 1200 6TH STREET, DETROIT MI 48226, or the OFFICE FOR DIVERSITY AND CIVIL RIGHTS, US FISH AND WILDLIFE SERVICE, 4040 NORTH FAIRFAX DRIVE, ARLINGTON VA 22203.

For information or assistance on this publication, contact: MDNR, WILDLIFE DIVISION, P.O. BOX 30444, LANSING, MI 48909-7944, <http://www.michigan.gov/dnr>. This publication is available in alternative formats upon request. TTY: Michigan Relay Center 1-800-649-3777

A harvest tag was issued as part of the hunting license. Hunters could purchase a maximum of two harvest tags (either one combination license or both firearm and archery licenses), excluding tags associated with antlerless licenses and Deer Management Assistance (DMA) permits. Archery and firearm licenses included one harvest tag, while the combination license had two harvest tags. A firearm license allowed a person to take one deer with at least one antler 3 inches or longer (Table 1). An archery license allowed an individual to take one deer of either sex. A person with a combination license could take two deer of either sex during the archery season or two antlered deer during the firearm season (Table 1). If two antlered deer were taken, one of these deer needed to have at least one antler with four or more points (qualifying points must be at least 1 inch).

An antlerless license could be purchased in addition to archery, firearm, or combination licenses. Antlerless deer licenses allowed hunters to take deer without antlers or with antlers shorter than 3 inches. Use of each antlerless license was restricted to a single DMU designated at the time of purchase. Two harvest tags were issued with each antlerless deer license purchased for 8 special regulation DMUs in northeastern Lower Peninsula (Alcona, Alpena, Crawford, Montmorency, Oscoda, Otsego, and Presque Isle counties). One harvest tag was issued with each license purchased for all other DMUs. Antlerless licenses were available for most of the state except in portions of the Upper Peninsula (UP). Antlerless licenses were valid on either public or private lands. The number of licenses available in DMUs open to antlerless deer hunting was restricted by quota. Hunters could purchase one antlerless license per day until the quota had been met.

DMA Permits were special antlerless permits issued to landowners in areas experiencing severe crop damage, or areas where management objectives included controlling disease or deer population. These permits allowed hunters to take an antlerless deer per permit during any deer season on the land where issued or adjacent private lands, with the landowners permission. To use these permits, the hunter must also have purchased a firearm, archery, combination, or antlerless deer license for the season in which they were hunting.

The youth season was held during September 28-29 on public and private lands statewide. Youths 12-16 years of age could take one deer using either a firearm license, combination license, antlerless license, or DMA permit. Youths participating during this season had to be accompanied by an adult at least 18 years old. All youths 12 and 13 years of age were restricted to archery-only hunting. Youth hunters could take no more than one deer during the season.

The archery season occurred statewide on public and private lands. This season was divided into an early and late season (i.e., October 1 to November 14 and December 1, 2002, to January 1, 2003). Archery licenses, antlerless licenses, combination licenses, and DMA permits could be used to take deer during the archery seasons using archery equipment.

The statewide regular firearm season occurred November 15-30. The muzzleloader season was held December 6-15 in the UP and December 13-22 in the LP. Hunters were allowed to take deer on both public and private lands with firearm and combination deer hunting licenses

during the regular firearm and muzzleloader seasons. Antlerless licenses (including DMA permits) also could be used during the firearm seasons.

The late antlerless season, open in most of the LP, occurred from December 23, 2002, through January 1, 2003. Hunters pursuing deer during this season had to possess an unused antlerless license (including DMA permits) and were limited to hunting on private land.

In 7 counties in the LP (Alcona, Alpena, Crawford, Montmorency, Oscoda, Otsego, and Presque Isle counties), an early firearm season for antlerless deer was held October 12-20. There also was an early antlerless firearm deer season in DMU 055 in the UP during September 21-27. Hunters participating during these early antlerless seasons had to possess an antlerless license, and hunting was restricted to private lands only.

METHODS

Following the 2002 deer hunting seasons, a questionnaire was sent to 52,589 randomly selected individuals that had purchased a hunting license (firearm, archery, antlerless, or combination deer hunting licenses). Hunters receiving the questionnaire were asked to report which seasons they pursued deer, number of days spent afield, and number of deer harvested. Hunters were instructed not to report hunting effort and harvest associated with DMA permits because landowners obtaining these permits were required to report the number of deer harvested.

Estimates were calculated using a stratified random sampling design (Cochran 1977) and were presented along with their 95% confidence limit (CL). This confidence limit can be added and subtracted from the estimate to calculate the 95% confidence interval. The confidence interval is a measure of the precision associated with the estimate and implies that the true value would be within this interval 95 times out of 100.

License buyers were assigned to one of four groups (strata). The first stratum consisted of people eligible only for the archery, regular firearm, and muzzleloader hunting seasons ($N = 487,383$). The second stratum consisted of people eligible to hunt during archery, regular firearm, muzzleloader, early antlerless, and late antlerless seasons ($N = 273,021$). Hunters in the third stratum were eligible to hunt during archery, regular firearm, muzzleloader, early antlerless, and late antlerless seasons, as well as the special early antlerless season in DMU 055 ($N = 2,784$). The fourth stratum consisted of people eligible to hunt during archery, regular firearm, muzzleloader, early antlerless, late antlerless, and youth seasons ($N=25,083$). The random sample consisted of 28,325 people from the first stratum and 15,598 people from the second stratum. An additional 2,747 people were included from the third stratum, and 5,919 people were from the fourth stratum. The stratified sampling design accounted for the varying probabilities of being selected from the four strata so estimates could be reliably extrapolated from the sample to all license buyers.

Estimates were calculated separately by the area where the hunt occurred. The state was divided into eight areas that closely matched the DNR's wildlife management administrative

units (Figure 1). The state was also divided into three ecological regions (UP, northern LP, and southern LP). These regions generally matched major ecoregions, except in the UP where two ecoregions were combined (Albert 1995). Ecoregions were regions having similar soils, vegetation, climate, geology, and physiography. Estimates were also calculated for each DMU (Figure 2, Appendix 1). Deer harvested from unknown locations were allocated among areas in proportion to the known harvest.

Questionnaires were initially mailed during mid-January 2003, and two follow-up questionnaires were mailed to nonrespondents. To increase the number of questionnaires returned, everybody that returned their questionnaire promptly was eligible to win a prize. Although 52,589 people were sent the questionnaire, 1,243 surveys were undeliverable resulting in an adjusted sample size of 51,346. Questionnaires were returned by 35,293 of 51,346 people receiving the questionnaire (69% response rate).

Estimates of harvest, hunting effort, and hunter participation are affected by the willingness of people to complete and return their questionnaires. This problem can confound comparisons of estimates made between years if response rates vary greatly. The percentage of people returning their questionnaire this year was lower than last year (69% versus 74%). To reduce bias caused by this lower response rate, an adjustment was made on the 2002 estimates to make them comparable to the 2001 estimates. Estimates of harvest, hunting effort, and hunter numbers were reduced by 1.15, 1.20, and 0.50%, respectively, to make estimates comparable to 2001. These reductions reflected the average decline noted between estimates calculated when 69 and 74% of the responses were used in 2000 and 2001 surveys.

RESULTS

In 2002, 788,271 people purchased a license to hunt deer in Michigan. The number of people buying a license in 2002 declined about 2% from 2001 (801,436 people purchased a license in 2001). Most of the people buying a license were male (92.1%), although 7.9% of the licensees were female. The average age of the license buyers was 41 years (Figure 3).

The number of 2002 deer harvest tags sold for all license types combined increased 1% since 2001 (Table 2). License buyers purchased an average of 2.3 harvest tags. About 86% of the license buyers purchased three or fewer harvest tags and 98% purchased five or fewer harvest tags (Figure 4). Hunters most frequently purchased antlerless and combination harvest tags (Figure 5). About 52% of the license buyers purchased at least one antlerless license (409,181 people), and 97% of antlerless license buyers purchased three or fewer antlerless licenses (Figure 6).

Although the number of harvest tags available increased by 1%, the sales of deer hunting licenses declined slightly (about 1%) in 2002 (Table 2). The increase in harvest tags occurred because two harvest tags were provided for antlerless licenses sold for the special-regulations DMUs in NE Lower Peninsula (7 counties).

About $94.0 \pm 0.2\%$ ($740,529 \pm 1,968$ hunters) of the people buying a license in 2002 actually spent time hunting deer (Table 3). Most hunters ($684,036 \pm 2,811$) pursued deer during the regular firearm season (Figure 7). Statewide, the number of people hunting deer during all seasons combined declined by nearly 2%. Hunter numbers declined by about 2% in the UP and about 3% in the northern LP. Hunter numbers were unchanged in the southern LP between 2001 and 2002.

Fewer people participated in early antlerless (-45%), archery (-2%), and regular firearm (-1%) seasons between 2001 and 2002 (Figure 8, Table 3). The decline during the early antlerless season occurred because fewer counties were open to hunting in 2002 (i.e., 7 versus 12 counties in 2001). Greater numbers of people hunted during the early antlerless in DMU 055 (+23%), late antlerless (+9%), youth (+7%), and muzzleloader (+2%) seasons.

About 45% of the days that hunters spent pursuing deer throughout the state occurred in the regular firearm season (Figure 9). Likewise, about 44% of the hunting effort occurred during the archery season. Nearly 11% of the hunting effort occurred in the muzzleloader and late antlerless seasons. Statewide, hunters devoted an average of 14.3 days afield hunting deer during all seasons combined (Table 4). Archers had the greatest number of days available to hunt deer (77 days) and devoted the greatest number of days afield ($\bar{x} = 14.7$ days/hunter) (Figure 10, Table 4).

For all seasons and areas combined, hunting effort was virtually unchanged between 2001 and 2002 (Table 3). Hunting effort increased during the special early antlerless season in DMU 055, but declined during the regular early and late antlerless seasons. Hunting effort during the archery, regular firearm, muzzleloader, and youth seasons was similar to levels reported in 2001.

An estimated 476,215 deer were harvested in 2002, an increase of nearly 3% from the number taken in 2001 (Figure 11, Tables 5-6). Statewide, the harvest of both antlerless deer and antlered bucks increased 3% from last year (Table 5). Between 2001 and 2002, deer harvest increased during the early antlerless in DMU 055 (+16%), muzzleloader (+11%), youth (+9%), and regular firearm (+6%) seasons (Figure 12, Tables 5-6). Harvest declined in the early antlerless (-56%), and late antlerless (-13%) seasons.

About 64% of the animals harvested (sexes combined) in 2002 were taken during the regular firearm season (Figure 13). Most of the antlerless deer (58%) and antlered bucks (69%) were harvested in the regular firearm season. Hunters took 25% of the harvested deer (sexes combined) during archery season. During the archery season, hunters took 23% of the antlerless deer and 27% of the antlered bucks harvested. Few antlered bucks (3%) were taken in the muzzleloader season. The muzzleloader and antlerless seasons accounted for 18% of the antlerless deer harvested.

About 85% of the animals harvested (sexes combined) in 2002 were taken on private lands (Table 7). Statewide, most of the antlerless deer (87%) and antlered bucks (83%) were harvested on private lands. Overall, harvest increased 6% between 2001 and 2002 on private lands but decreased 12% on public lands.

Statewide, 43% of the deer hunters harvested at least one deer (all deer seasons and sexes combined) in 2002 (Figure 14, Table 8). About 23% of the hunters took an antlerless deer and 28% took an antlered buck. About 14% of deer hunters harvested two or more deer.

Hunters were most successful in taking a deer during the early antlerless season in DMU 055 (Figure 15, Table 9); 67% of the hunters in this early antlerless season took a deer. About 35% of the hunters harvested a deer (sexes combined) during the regular firearm season. Hunter success was slightly lower during the early antlerless, archery, and youth seasons (30% success for each season). Nearly 23% of the hunters took an antlered buck and 17% harvested an antlerless deer during the regular firearm season. Hunter success was lowest in the muzzleloader season (14% successful).

ACKNOWLEDGEMENTS

I thank all the landowners and hunters that provided information. Pat Bancroft, Theresa Riebow, Mindy Sweeney, and Becky Walker completed data entry. Mary Benson, Brent Rudolph, Rod Clute, and Valerie Tuovila reviewed a previous version of this report.

Table 1. Kind of deer that could be taken during the hunting seasons for each combination of season and deer hunting license.

Type of license (harvest tag) or permit	Season	Kind of deer that could be harvested ^a
Archery License	Archery seasons	Antlerless or antlered deer ^b
Firearm License	Regular Firearm, Youth, or Muzzleloading seasons	Antlered deer only ^b
Combination License (Regular harvest tag)	Archery or Youth ^c seasons	Antlerless or antlered deer
Combination License (Regular harvest tag)	Regular Firearm, Youth, or Muzzleloading seasons	Antlered deer only
Combination License (Restricted harvest tag)	Archery seasons	Antlerless deer or a deer that has at least 1 antler with 4 or more antler points, 1 or more inches in length
Combination License (Restricted harvest tag)	Regular Firearm, Youth, or Muzzleloading seasons	A deer that has at least 1 antler with 4 or more antler points, 1 or more inches in length
Antlerless License	All seasons	Antlerless deer only
Deer Management Assistance (DMA) permit ^d	All seasons	Antlerless deer only

^aAntlered deer had antlers at least 3 inches in length; antlerless deer included deer without antlers and deer with antlers less than 3 inches in length. Hunters could harvest a maximum of 2 antlered deer per year (all seasons combined); maximum antlerless limit varied by region of the state.

^bIf a person takes 2 antlered deer during all seasons combined, one of the antlered deer must have at least 1 antler with 4 or more antler points, 1 or more inches in length.

^cYouth hunters that used archery equipment could harvest either an antlered or antlerless deer; all youths 12 and 13 years of age were restricted to archery-only hunting.

^dPermits issued to landowners in areas experiencing severe crop damage or areas where management objectives included controlling diseases or severe deer overpopulation. To use these permits, the hunter must also have purchased a firearm, archery, combination, or antlerless deer license for the season in which they were hunting.

Total Harvest Tags	1,778,051	1,768,853	1,789,696	1.2%

^aThe number of antlerless licenses reported sold in 2001 was incorrectly reported in Frawley (2002).

^bCombination licenses included two harvest tags. Most other license types had one harvest tag.

^cIn 2002, two harvest tags were issued with 39,211 antlerless licenses sold for eight management units in NE Lower Peninsula.

^dPrior to 2001, Block Permits were included with DMA permits.

^aHarvest estimates do not include deer taken with DMA permits. An additional 4,338 deer were taken with these permits.

^bColumn totals for hunting effort and harvest may not equal regional and statewide totals because of rounding errors.

^cNumber of hunters does not add up to statewide total because hunters can hunt in more than one DMU.

^dSee Figure 2 for the locations of DMUs.
