

MICHIGAN DEPARTMENT OF NATURAL RESOURCES  
WILDLIFE DIVISION REPORT NO. 3038-A\*

THE 1983 DEER SEASONS\*\*

by Tim F. Reis

INTRODUCTION

White-tailed deer (*Odocoileus virginianus*) were legal game in 1983 during several types of seasons. First, a split bow and arrow season, where all deer were legal, ran from October 1 to November 14 and again from December 1 to January 1 statewide. Second, the traditional firearm hunting season ran from November 15 to 30 statewide and was for adult, male deer with three-inch or longer antlers. In conjunction with this season, 76 deer management units were also open to the taking of limited numbers of antlerless deer by hunter's choice permit holders. The season dates were November 15 to December 11 in Unit 215 in the Upper Peninsula and November 15 to 30 in all other units. Third, there was a statewide season for hunters using muzzleloading rifles from December 2 to 11. Hunter's choice licenses were again valid during the muzzleloader season for those permittees not killing a deer during the November 15-30 firearm season. During the muzzleloading season, hunters were restricted to using a .44 caliber or larger muzzleloader loaded with black powder or pyrodex and firing a patched round ball. Properly licensed hunters could legally kill two deer on the mainland, one with bow and arrow and one with a firearm. In addition to their regular bag limits, hunters could also take up to two deer on South Fox Island (Unit 41), one with a firearm and one with bow and arrow. Finally, hunting parties of not less than four persons could purchase a camp deer permit which would allow them to take one antlered buck for camp purposes. Camp permits could be purchased for either firearm or bow and arrow hunting camps.

The total legal harvest by all hunters, 158,710, was down 21 percent from 1982.

REGULAR FIREARM SEASON

Regular firearm season hunter numbers, totaling 667,560, continued to decline for a second year from the 1981 record season. Their numbers were down six percent from 1982. Statewide, the buck harvest of 99,020 was a decline of ten percent from 1982. In the Upper Peninsula, hunter numbers dropped by three percent to 91,280; however, the buck harvest increased by two percent to 20,420. The 354,680 hunters and 50,510 bucks recorded for the northern Lower Peninsula represented a nine percent and 17 percent decline from 1982, respectively. The southern Lower Peninsula experienced less of a decline in hunter numbers and buck harvest. Hunters decreased less than two percent to 221,600 and the buck harvest less than three percent to 28,090.

### HUNTER'S CHOICE PERMITS

Statewide, the number of hunter's choice permit hunters (110,580) and antlerless deer take (27,320) declined by 38 percent and 48 percent, respectively, from 1982. In the Upper Peninsula, the number of areas open to antlerless deer hunting was increased from two to four. As a result, 48 percent more hunter's choice permit hunters (5,480) harvested 47 percent more antlerless deer (1,700) than in 1982. In the northern Lower Peninsula, the number of management units was reduced from 72 to 37. The number of hunter's choice permittees declined by 59 percent to 34,900, and antlerless harvest declined by 65 percent to 10,550. The 35 units in the southern Lower Peninsula experienced an overall decline of 22 percent in permit hunters (70,200) and 31 percent in antlerless take (15,070).

Since 1977, two types of hunter's choice permits have been issued, regular hunter's choice and landowner limited, with separate quotas established for each. A "landowner" as defined during the 1983 deer hunting season must have owned, rented, or leased 40 acres or more of huntable land within the designated unit. A landowner limited permit entitled the holder to kill an antlerless deer only on the land as described above or on adjoining private lands with permission of the owners. Besides the "landowner", members of his immediate family including spouse, children, parents, and brothers and sisters who also lived on the qualifying land, were eligible to apply for landowner limited permits. In 1983, landowner limited permits were issued in 75 out of the 76 deer management units open to antlerless hunting (not Area 41, South Fox Island).

### MUZZLELOADER SEASON

The number of muzzleloader hunters (43,410) in 1983 was a new high. However, their harvest of 2,720 deer was down 6 percent from 1982. It was the second consecutive year that unfilled hunter's choice permits were valid during the muzzleloader season.

### BOW AND ARROW SEASON

Archery deer hunting declined slightly in 1983. The number of bowhunters totaled 210,450, dropping six percent from 1982. Their harvest of 30,640 was a decline of 20 percent from the previous year archery harvest.

### CAMP PERMITS

In 1983, 881 camps took 300 bucks. About 68 percent of the camp deer permits were purchased for the firearm deer season.

### SOURCES OF HUNTING INFORMATION

The estimates of deer harvested and hunter numbers were derived from mail surveys of randomly selected samples of license purchasers and permit holders. Reports were solicited from 12,958 firearm deer hunters of whom 85 percent responded; from 24,650 hunter's choice permittees of whom 94 percent responded; from 6,568 bow and arrow deer hunters of whom 88 percent responded; and from 316 camp deer permit holders of whom 95 percent responded.

[1] License types eliminated by new legislation enacted in 1980.

[2] These are the numbers of license holders and permittees who actually hunted.

[3] Management area boundaries do not correspond exactly to counties, hence antlerless kill figures may be slightly different here from those given by area. Antlerless kill figures include firearm season kills only.

[1] Sportsman's and Senior hunting licenses are valid for firearm, bow and arrow, and muzzleloader hunting in the respective seasons.

[2] Camp permits could be purchased for either firearm or bow and arrow deer hunting.

[3] Military licenses were issued for specific seasons and dates but all licenses issued are grouped here because of the difficulty in separating them into the types of hunting for which they were issued.

[4] Sample used not adequate to estimate this license type.

[5] License types eliminated by legislation enacted in 1980. Camp permits were restored in 1981.
